# Agreement Attraction

(1) The **key** **was** rusty.

## Agreement Attraction

(1) The **key** **was** rusty.

(2) \*The **key** **were** rusty.

## Agreement Attraction

(1) The **key** **was** rusty.

(2) \*The **key** **were** rusty.

(3) \*The **key** to the *cells* **were** rusty.

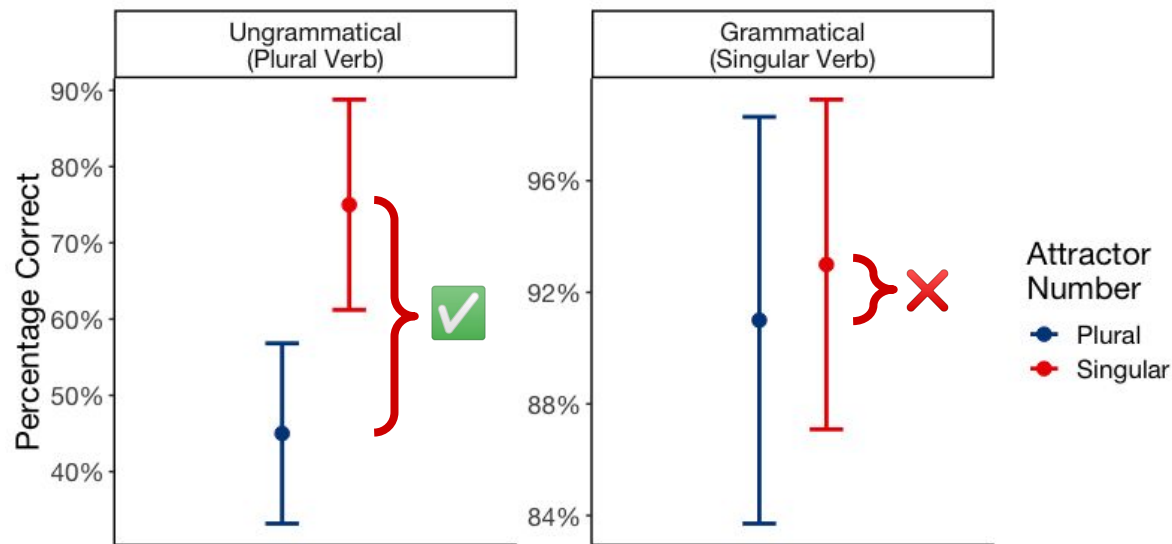

# Agreement Attraction: **Comprehension**

- Word-by-word, speeded acceptability judgment task

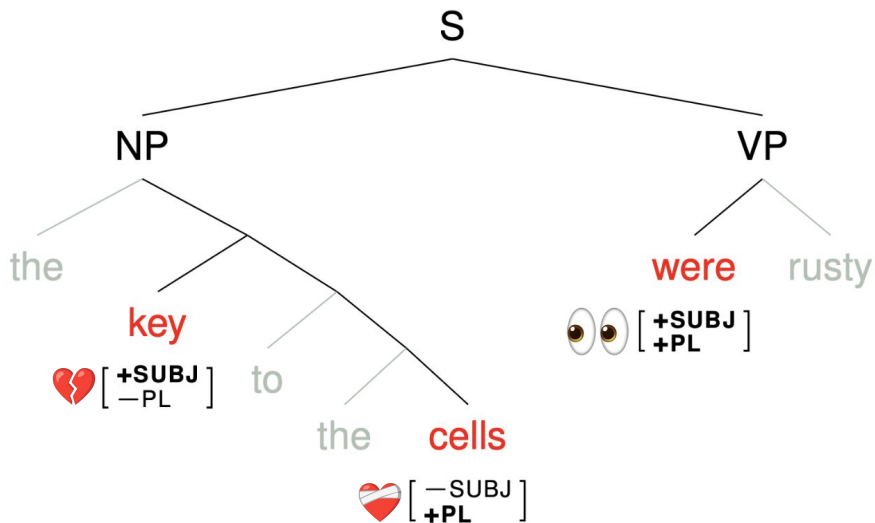

# Agreement Attraction: **Grammaticality Asymmetry**

- Attractor number mattered only in ungrammatical sentences

# Agreement Attraction: **Accounts**

- **Retrieval:** Partial match may occasionally save the retrieval.

- **Representational:** probing acceptability in ungrammatical sentences

# Agreement Attraction: **Accounts**

- **Retrieval:** Less interference when the true subject is a *perfect match*.

- **Representational:** probing *unacceptability* even in grammatical sentences

# Roadmap

- ❑ 1. Hammerly et al. (2019) and Bias Calculation Problem
- ❑ 2. Turkish Experiment
- ❑ 3. Re-analysis of Hammerly et al. (2019)
- ❑ 4. Meta-analysis

# Grammaticality Asymmetry: **Response Bias**

Hammerly et al. (2019)

- Grammaticality asymmetry does not have to favor Retrieval

# Grammaticality Asymmetry: **Response Bias**

Hammerly et al. (2019)

- Grammaticality asymmetry does not have to favor Retrieval
- People have a priori 'yes' bias

# Grammaticality Asymmetry: **Response Bias**

Hammerly et al. (2019)

- Grammaticality asymmetry does not have to favor Retrieval
- People have a priori ‘yes’ bias
- When bias is reduced, both grammatical and ungrammatical sentences will show attraction effects

# Grammaticality Asymmetry: **Response Bias**

Hammerly et al. (2019)

- Manipulated bias through
  - instructions
  - ungrammatical to grammatical filler ratios

# Grammaticality Asymmetry: **Response Bias**

Hammerly et al. (2019)

- Manipulated bias through
  - instructions
  - ungrammatical to grammatical filler ratios
- Results: Symmetrical effects independent of well-formedness.  
Thus, asymmetry is a residue of a response bias.

# Grammaticality Asymmetry: **Response Bias**

- **Problem:** They used all items in bias estimation.

## Grammaticality Asymmetry: **Why Fillers?**

- Experimental items can inflate the bias estimate

## Grammaticality Asymmetry: **Why Fillers?**

- Experimental items can inflate the bias estimate
- Bias in experimental items may tap into different mechanisms

## Grammaticality Asymmetry: **Why Fillers?**

- Experimental items can inflate the bias estimate
- Bias in experimental items may tap into different mechanisms
- Fillers are constant between participants

## Grammaticality Asymmetry: **Why Fillers?**

- Experimental items can inflate the bias estimate
- Bias in experimental items may tap into different mechanisms
- Fillers are constant between participants
- More conservative test of the hypothesis

# Grammaticality Asymmetry: **Why Fillers?**

- Experimental items can inflate the bias estimate
- Bias in experimental items may tap into different mechanisms
- Fillers are constant between participants
- More conservative test of the hypothesis
- Indifferent to experimental manipulations

# Roadmap

- ✓ 1. Hammerly et al. (2019) and Bias Calculation Problem
- ❑ 2. Turkish Experiment
- ❑ 3. Re-analysis of Hammerly et al. (2019)
- ❑ 4. Meta-analysis

## Our Study ( $N_{\text{subject}} = 114$ )

**Goal:** to test Hammerly et al. theoretical findings and verify bias results.

# Our Study: **Experimental Items**

- Used Genitive modifier DPs as attractors (Lago et al., 2019)

(4)  $[_{DP} [_{DP} \text{Milyoner-**ler**-in} ] \text{ terzi-si} ]$   
millionaire-**PL**-GEN      tailor-POSS  
“the tailor of *the millionaires*”

# Our Study: **Experimental Items**

- Ungrammaticality due to singular head and plural verb.

(5) \* [<sub>DP</sub> [<sub>DP</sub> *Milyoner-**ler**-in*] *terzi-si*] *kov-ul-du-**lar***.  
millionaire-**PL**-GEN tailor-POSS fire-PASS-PST-**PL**  
“the tailor of *the millionaires* were fired.”

# Our Study: **Experimental Items**

- Within-subject factors: *Verb x Attractor number*

- (6) a. \* [<sub>DP</sub> [<sub>DP</sub> *Milyoner-ler-in* *terzi-si*] *tamamen* *gereksizce* *kov-ul-du-lar.*  
*millionaire-PL-GEN* *taylor-POSS* *completely* *without\_reason* *fire-PASS-PST-PL*  
“The *taylor* of *the millionaires* *were fired* for no reason at all.”
- b. \* *Milyonerin* *terzisi* *tamamen* *gereksizce* *kovuldular.*
- c. *Milyonerlerin* *terzisi* *tamamen* *gereksizce* *kovuldu.*
- d. *Milyonerin* *terzisi* *tamamen* *gereksizce* *kovuldu.*

# Our Study: **Bias**

- Between subjects factor: Bias.
- Manipulated bias through
  - instructions
  - ungrammatical to grammatical filler ratios

# Our Study: **Bias**

- Between subjects factor: Bias.
- Manipulated bias through
  - instructions
  - ungrammatical to grammatical filler ratios
- No bias difference between groups

# Our Study: **Bias**

- Between subjects factor: Bias.
- Manipulated bias through
  - instructions
  - ungrammatical to grammatical filler ratios
- No bias difference between groups

# Our Study: **Bias**

- Between subjects factor: Bias.
- Manipulated bias through
  - instructions
  - ungrammatical to grammatical filler ratios
- No bias difference between groups
- Exploited the individual bias differences

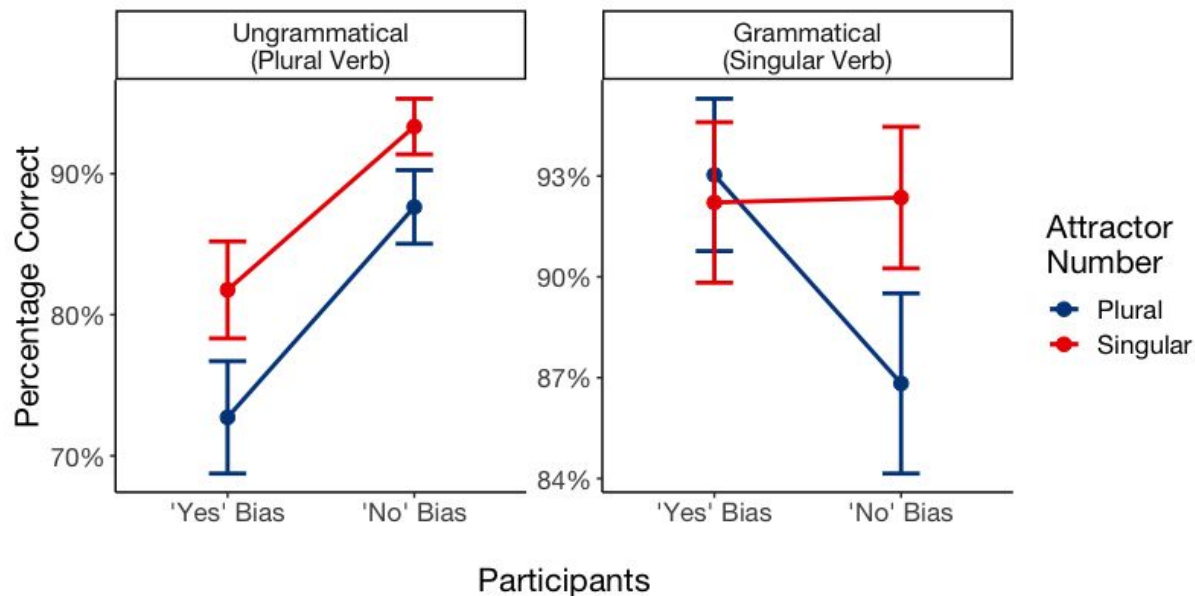

# Our Study: Results

- Attraction in ungrammatical sentences independent of response bias

# Our Study: Results

- Attraction in **grammatical** sentences as a function of bias

# Our Study: **Bayesian Model**

- Verified our results with a maximal Bayesian GLM.
  - Fitted to **grammatical** sentences
  - No main effect of PLURAL ATTRACTOR
  - $P(\text{INTERACTION} < 0) = 0.97$

# Our Study: **Bayesian Model**

- The effect of plural attractor is more pronounced in people with less “yes” bias in grammatical sentences

## Our Study: **Findings**

- Replicated theoretically significant findings of Hammerly et al.

## Our Study: **Findings**

- Replicated theoretically significant findings of Hammerly et al.
- Grammaticality asymmetry can be explained via response bias

## Our Study: **Findings**

- Replicated theoretically significant findings of Hammerly et al.
- Grammaticality asymmetry can be explained via response bias
- No need for a strong preference of retrieval accounts

# Roadmap

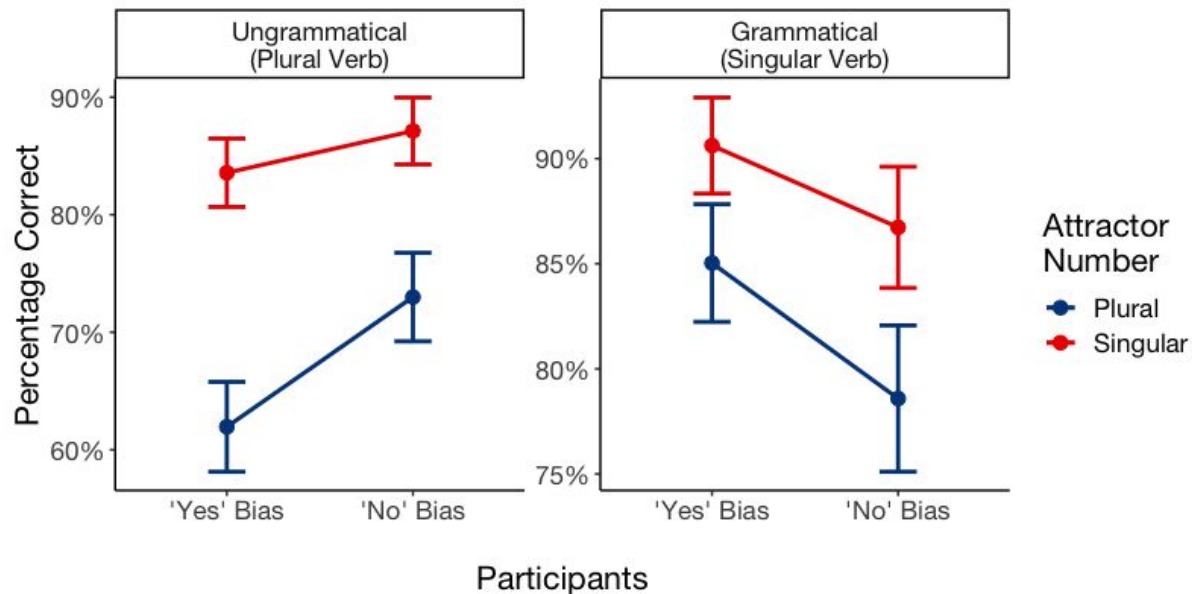

- ✓ 1. Hammerly et al. (2019) and Bias Calculation Problem
- ✓ 2. Turkish Experiment
- ❑ 3. Re-analysis of Hammerly et al. (2019)
- ❑ 4. Meta-analysis

# Reanalysis of Hammerly et al. (2019)

- Grouped participants according to their bias in fillers

# Reanalysis of Hammerly et al. (2019): **Results**

- Grouped participants according to their bias in fillers
- Attraction in both grammatical and ungrammatical sentences independent of response bias

# Reanalysis of Hammerly et al. (2019): **Bayesian Model**

- Verified lack of bias effect with a maximal Bayesian GLM.
  - Fitted to **grammatical** sentences
  - Clear main effect of PLURAL ATTRACTOR,  $P(\beta < 0) > 0.999$
  - No interaction,  $P(\text{INTERACTION} < 0) = 0.34$

# Reanalysis of Hammerly et al. (2019): **Bayesian Model**

- Having weaker “yes” bias did not affect the contribution of the plural attractor

## Reanalysis of Hammerly et al. (2019): **Findings**

- Attraction in grammatical sentences surfaces even with “yes” bias
- Bias in filler was not reflected in experimental items
- Original findings does not reflect participants’ a priori bias

# Roadmap

- ✓ 1. Hammerly et al. (2019) and Bias Calculation Problem
- ✓ 2. Turkish Experiment
- ✓ 3. Re-analysis of Hammerly et al. (2019)
- ❑ 4. Meta-analysis

# Meta-analysis

- What about other experiments that does not have bias manipulation?

# Meta-analysis: **Bayesian Model Details**

- What about other experiments without bias manipulation?
  - Conducted a multilevel Bayesian meta-analysis
  - Fitted to correct responses to **grammatical** sentences
  - Predictors:
    - Experiments, subjects, and items as random effects
    - Bias Value (calculated using fillers)
    - Attractor Number
    - The interaction
    - Trial number

# Meta-analysis: By-experiment Interaction Posteriors

→ Cannot say grammaticality asymmetry reflects response bias, it sometimes does.

# Roadmap

- ✓ 1. Hammerly et al. (2019) and Bias Calculation Problem
- ✓ 2. Turkish Experiment
- ✓ 3. Re-analysis of Hammerly et al. (2019)
- ✓ 4. Meta-analysis

# Take-Home Messages

❖ The effect in ungrammatical sentences: **Persistent**

# Take-Home Messages

- ❖ The effect in ungrammatical sentences: **Persistent**
- ❖ The effect in grammatical sentences? **Finicky**

# Take-Home Messages

- ❖ The effect in ungrammatical sentences: **Persistent**
- ❖ The effect in grammatical sentences? **Finicky**
- ❖ Asymmetry is still important.

# Take-Home Messages

- ❖ The effect in ungrammatical sentences: **Persistent**
- ❖ The effect in grammatical sentences? **Finicky**
- ❖ Asymmetry is still important.
- ❖ Grammaticality impacts attraction effects' variability.

# Appendix A: Our Exp with Different Bias Estimations

- In “Towards Ungrammatical” Bias, we had more ‘yes’ bias.

## Appendix B: Our Exp with Original Manipulation Grouping

- Even when we look at “Ungram” as more ‘yes’ bias, and “Gram” as equi-bias, our results do not follow from bias-informed theories

# Appendix C: Model Specifications

- Packages: cmdstanr and brms
- Priors: Reasonable Agnostic Priors

Intercept  $\sim \text{Normal}(0,1)$   
 $\beta \sim \text{Normal}(0,1)$   
 $\sigma \sim \text{Normal}(0,1)$   
 $\rho \sim \text{LKJ}(2)$

- Sum contrast coding

Bias is continuous, no coding.  
+0.5 for Plural Attractor  
-0.5 for Singular Attractor  
(+0.5 for Ungrammatical)  
(-0.5 for Grammatical)

# Appendix C: Model Specifications

- Formula & Predictors:
  - Continuous Response Bias Value
  - Attractor Number
  - The interaction
  - Trial Number (log)

```
response_yes ~ bias * attractor_number + log_trial +  
              (bias * attractor_number + 1 | subject) +  
              (attractor_number + log_trial + 1 | item)
```

# Appendix D: Bias Estimations

- How to calculate bias? 
$$- \frac{Z(\text{Hit Rate}) + Z(\text{False Alarms})}{2}$$
- What happens when we use ALL Items?

# Appendix E: RTs?

- What do we see in vanilla attraction experiments?
  - Overall slowdown for ungrammaticals
  - Additional slowdown for plurals in ungrammaticals
- What does bias-informed analysis expect?
  - No slowdown for ungrammaticals
  - Same contribution from plurals in both grammatical and ungrammatical

## Appendix E: RTs?

- Our experiment RTs close to prediction, but not quite.
- Hammerly et al's? RTs look close to the prediction as well.

# Appendix E: RTs?

- Maybe our bias estimation is actually not good?
  - Hammerly bias(all) predictions ✓
  - Our bias(all) predictions ✗
- Their bias estimation: Their Acceptability & RT ✓, Our Acceptability & RT ✗
- Our bias estimation: Their Acceptability & RT ✗, Our Acceptability & RT ✓

Hammerly et al.

Our Experiment

# Appendix F: Stable Attraction in Ungrammaticals

- Attraction effects are persistent in ungrammatical sentences.
  - independent of response bias and experiment.

# Appendix G: Finicky Attraction in Grammaticals

- Attraction effects vary in grammatical sentences.
